       push (shead, 50);
       Print node (head);
      returno;
    (i) How array is different from the linked
    list.
    (ii) write a program to add the first element
     of one list to another list of example we
     have {1,2,3} in list i and {4,5,63 in list 2
     we have to get {4,1,2,3} as output for
     list 1 and {5,6} for Nist 2
501: (1) The major difference blw Array and linked
     lists regards to their structure, Arrays are
     index based data Structure where each
    clement associated with an index on the
    other hand, linked list relies on reference
    to the previous and next element
```
